

Abstract

Title:

Attack Founding and Attack Leading Analysis - 2010 FIFA World Cup

Objectives:

The primary objective of this thesis is to implement quantitative comparison of effectual attacks which were finished with a shot or a final pass. We are going to compare English and Mexican teams to show the attacks graphically and, consequently, to evaluate the aims in view, which were provided thanks to our detailed study of every single attack.

Methods:

The work uses the indirect observation method in particular matches which were available due to a vide tape. Successful attacks were noted into a recording form. This analysis is focused on a detailed study of each attack from its foundig to its ending.

Results:

The results show the types and models realized during the monitored attacks of English and Mexican teams within the 2010 FIFA World Cup. Further, the offensive phase of the game in the modern aspect of football is clarified. Last but not least, we are able to compare the drawn up models one another and apply them to different achievement groups.

Keywords:

The 2010 FIFA World Cup, football, types and founding of attacks, England, Mexico, quantitative analysis, comparison.
